

[COMPOUND MITER GUIDE FOR HAND SAW]

Abstract

A compound miter guide having a base plate, fence base plate fastener, blade guide, at least one side rail, and at least one protractor. The fence is pivotally attached to the bottom of the base plate. The base plate fastener is used to movably connect the fence to the base plate along the curved slot. The blade guide is pivotally attached to the base plate at the cutting side of the base plate using a pivotal connection. The at least one side rail has a top and bottom and being attached between the base plate and the blade guide. The at least one protractor is inscribed between the top and the bottom on one of the at least one side rail.
